

Open your launcher

- 1. Navigate to Installations tab
 - Pick the appropriate Installation where Noobtiffine is installed
 - (The appropriate installation always have the same game directory as you inputted in the installer)
- 2. Press the hamburger menu
 - Choose edit

Pick the correct Modloader Version

- Run minecraft using the appropriate quilt modloader version

- 1. Quilt Loader
- 2. Minecraft Version

Installation Complete!

- That installation will now run with Noobtiffine

For the best results, make sure these resource packs are selected & above default :

- Glass Pane Culling Fix
- Default Connected Textures
- lambdabettergrass

Tip:

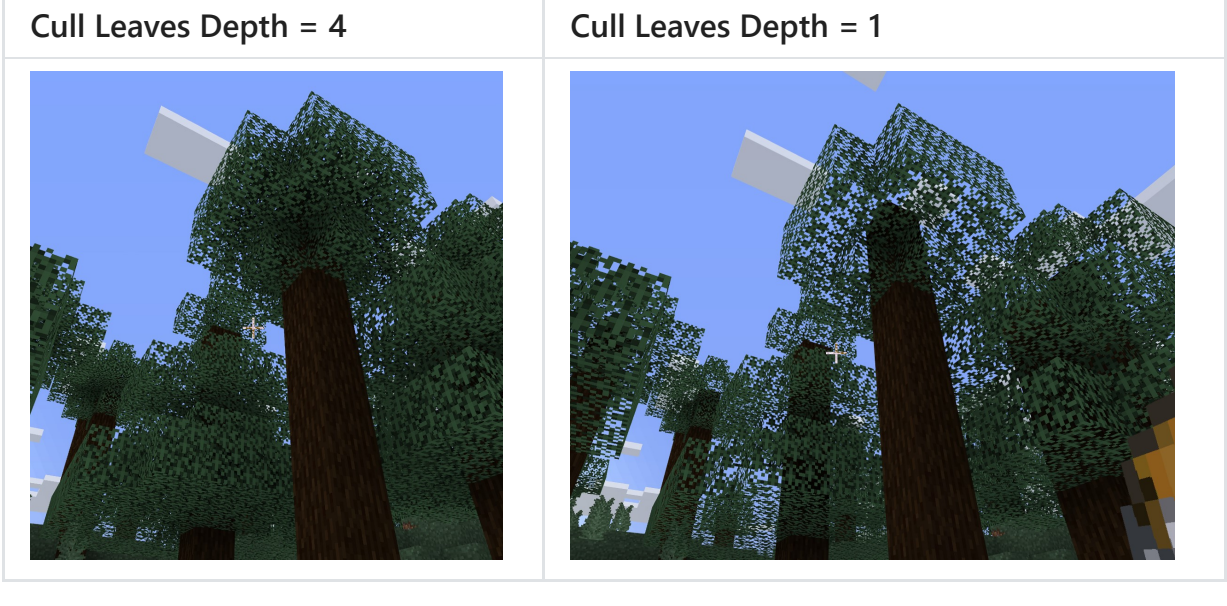

- Anti Aliasing (TAA) can be enabled by using shaders accessible from: Video settings > shaders > AntiAliasing shaders

- Alternatively you can make the game render in higher resolutions to eliminate jaggedness altogether, rather than just in motion like the shader implementation. To do this: Mods > ResolutionControl+ > click the logo

- Leaves may look bad, you can make it better by changing Cull Leaves Depth (video settings > performance)

*Increasing Cull Leaves Depth reduces FPS mainly in dense forests

- As long as there's enough RAM, you can increase the game render distance to whatever you want with *minimal fps impact* if you set `singleplayer server view distance` (in Mods > Bobby > click the logo) to your usual render distance
