

Open your launcher

1. Choose an appropriate profile where Noobtine is installed (or you can create a new one & skip this step)

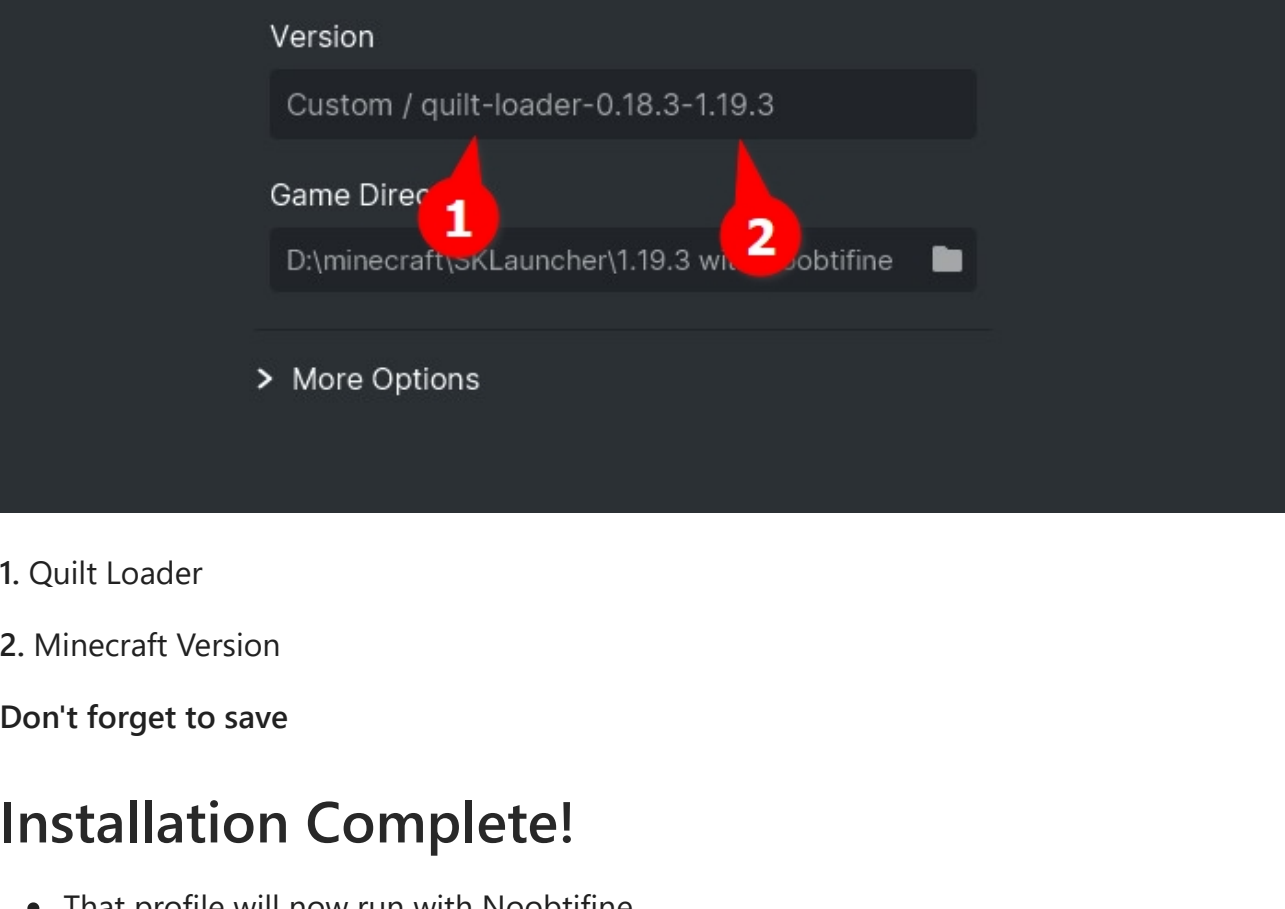

- (The appropriate installation always have the same game directory as you inputted in the installer)

2. Choose edit Profile

Pick the correct Modloader Version

- Run minecraft using the appropriate quilt modloader version

1. Quilt Loader

2. Minecraft Version

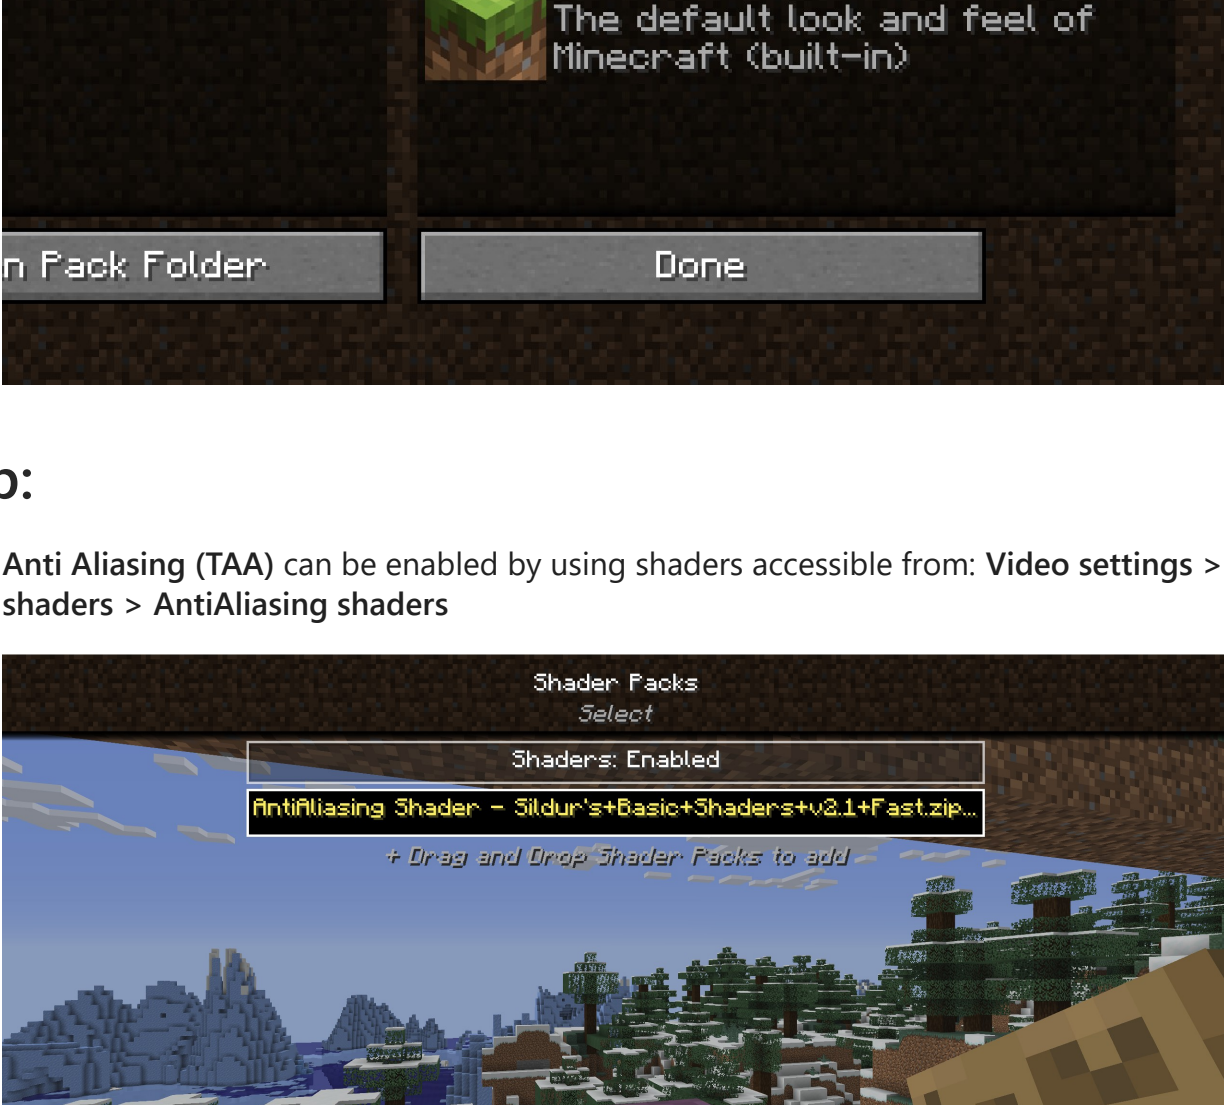

Don't forget to save

Installation Complete!

- That profile will now run with Noobtine

For the best results, make sure these resource packs are selected & above default :

- Glass Pane Culling Fix
- Default Connected Textures
- lambdabettergrass

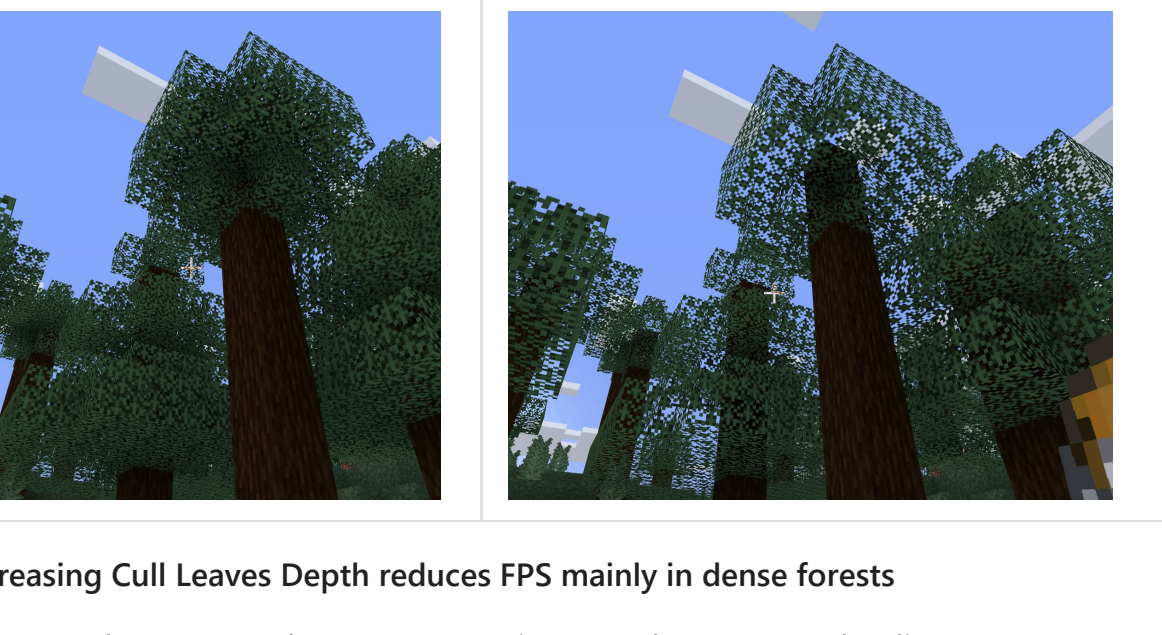

Tip:

- Anti Aliasing (TAA) can be enabled by using shaders accessible from: Video settings > shaders > AntiAliasing shaders

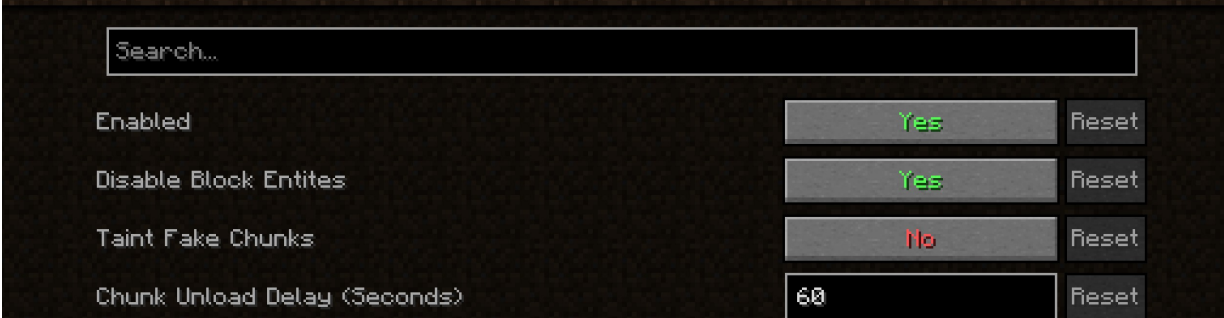

- Alternatively you can make the game render in higher resolutions to eliminate jaggedness altogether, rather than just in motion like the shader implementation.

To do this: Mods > ResolutionControl+ > click the logo

- Leaves may look bad, you can make it better by changing Cull Leaves Depth (video settings > performance)

*Increasing Cull Leaves Depth reduces FPS mainly in dense forests

- As long as there's enough RAM, you can increase the game render distance to whatever you want with *minimal fps impact* if you set singleplayer server view distance (in Mods > Bobby > click the logo) to your usual render distance
