

Open your launcher

- Picking the safe Quilt loader

IMPORTANT: TLauncher is known to modify their version releases for shady reasons ([more about it here](#)), therefore its highly recommended to use original versions

Fortunately Noobtiffine bundles its own Quilt loader version from [original source](#)

Noobtiffine bundled Quilt loader has these characteristics:

- quilt-loader
- Quilt loader version
- Minecraft version

Installation Complete!

- TLauncher will now run with Noobtiffine

For the best results, make sure these resource packs are selected & above **default** :

- Glass Pane Culling Fix
- Default Connected Textures
- lambdabettergrass

Tip:

- Anti Aliasing (TAA) can be enabled by using shaders accessible from: **Video settings > shaders > AntiAliasing shaders**

- Alternatively you can make the game render in higher resolutions to eliminate jaggedness altogether, rather than just in motion like the shader implementation. To do this: **Mods > ResolutionControl+ > click the logo**

- Leaves may look bad, you can make it better by changing **Cull Leaves Depth** (video settings > performance)

***Increasing Cull Leaves Depth reduces FPS mainly in dense forests**

- As long as there's enough RAM, you can increase the game render distance to whatever you want with **minimal fps impact** if you set **singleplayer server view distance** (in **Mods > Bobby > click the logo**) to your usual render distance
